

# 1. Top 5 customers with the least amount of purchases?

The customers who has spent less money comes under this table. I found the solution using customers, invoice, invoiceline tables. I used line charts for visualization. We can use this data while working on companies offers to the customers.

## 2. Who is most popular artist in each country?

We determine most popular artist with highest number of sales in the country. Visualization shows country and popular artist and their no of sales In that country. I found solution by using invoice line, track, album, invoice, customers and artist tables.

Note:- X-axis shows country and artist ID  
Y-axis shows no of sales in the country.

### 3. Who is writing Metal music?

We can use this data to increase our customers. We know that people are liking metal music, by seeing this visualization we can invite that artist to play more songs. I found the solution by using genre, track, album and artist tables.

## 4. Which playlist has earned most according to the invoiceline?

These are the most popular playlist liked by the customers and earned profits. i.e, customer spent most on this playlist. This data can be used while we are calculating on expansion or to increase our profits etc. I found the information using the playlist, track, invoice line tables. By seeing visualization, we can say that music playlist earned most profits.
